"Advanced ERP Software"

Why
Accurate ERP

- › Administration
- › Accounts
- › Store (Inventory)
- › Purchase And Sale
- › Asset Management
- › Payroll
- › Workshop

Administration

Our ERP software has a well-organized and powerful administration management feature, which grants you the ability to manage users effectively, define their permission levels.

Accounts

Our ERP app offers a complete accounting system with a fully-integrated module for accurate data across the organization. It handles ledger, payables/receivables, journal vouchers, credit/debit notes, and bank/cash transactions. Making critical decisions is easier with this comprehensive system.

Store (Inventory)

The ERP inventory module is a software solution that helps businesses manage inventory levels, track stock movements, and optimize supply chain operations. It provides real-time inventory insights, and tracks inventory costs and pricing.

Purchase and Sale

Purchase and sale modules manage transactions related to buying and selling goods or services. They handle processes such as order management, inventory tracking, pricing, invoicing, and payment management.

Asset Management

asset module is a component of an ERP system used to track, manage, and maintain an accurate inventory of an organization's fixed assets, schedule maintenance, calculate depreciation, and manage asset disposal.

Payroll

A payroll module is a component of an ERP system that automates the process of paying employees. It calculates gross pay, deductions, taxes, and other benefits, and generates paychecks and reports.
